

NATURAL SURFACE - MOSS

Notes on the Natural Surface - Moss

- The moss surface is an enhanced natural product for which slight differences in colour are normal.
- Manufactured 100% by hand
- The product is up to 60 % sound-absorbing.
- Like any moss, the surface has antibacterial properties.
- The hygienic material is therefore even suitable for the catering sector.
- The moss can be cut with scissors and cutter knives and, depending on the surface, can be easily stapled or screwed to the wall.
- Keep the room humidity between 40 and 70% to prevent the moss from drying out.

Mounting Natural Surface - Moss

- Our natural moss surface is UV-resistant and maintenance-free thanks to cosmetic colours. Therefore, please use disposable gloves while installing it or wash your hands afterwards to avoid soiling other objects.
- We recommend laying out the individual panels in advance to decide how you want to combine them for a characteristic look.
- Measure the wall in advance and draw a right angle before you start with the first panel.
- When installing additional panels, make sure that they are fitted exactly at right angles to each other and that no moss gets between the carpet backings.
- Finally, the moss should be "kneaded" at the butt joints to form a surface and spread so that no transitions are visible.
