

RETARDER FOR FSG CLEANER

Uses

Is added to FSG plastic cleaners as well as FSG industrial cleaners to achieve optimum cleaning results on dark surfaces or surfaces with a high gloss level.

Product Characteristics

The addition of the retarder extends the evaporation time of the cleaners. In particular with dark and glossy surfaces, you can thus minimise the formation of streaks and stripes.

Processing Information

Add the retarder in the desired proportion. Then briefly shake up the mixture.

Product Data

Physical state: liquid

Mixing ratio: 1 : 3 to 1 : 5

Colour: colourless

Shelf life: at least 2 years, if stored properly in original containers

Safety Instructions

- highly flammable
- keep away from ignition sources - do not smoke
- do not inhale vapours
- do not allow to enter the sewage system
- use only in well-ventilated rooms

Extract from the law. For further information please see label and Material Safety Data Sheet.

Disposal Instructions

- do not allow material to enter sewage system
- Return empty containers to the manufacturer or drain and vent them completely and recycle them.

For further information see EC Safety Data Sheet or ask your local Waste Management Office.

Delivery Form

1 l	bottles
5 l	canisters
